ViPrimePLUS Series II

Next-Generation PCR Detection.

Engineered for Confidence. Designed for Discovery.

Smarter Design. Greater Flexibility. Reliable Results.

Precision You Can Trust. Performance You Can Count On.

As molecular detection testing continues to advance, laboratories require greater sensitivity, broader target coverage, and more streamlined workflows. To meet these evolving needs, Vivantis proudly introduces ViPrimePLUS Series II—a re-engineered Real-Time PCR Gene Detection portfolio built on the trusted ViPrimePLUS platform. Powered by the latest advances in bioinformatics, assay design, and user-focused innovation, Series II delivers enhanced specificity, comprehensive target coverage, and consistent performance, providing a flexible, reliable, and convenient solution for modern molecular detection testing.

Designed for research and molecular testing laboratories, ViPrimePLUS Series II supports a broad spectrum of applications. To accommodate different sample types and laboratory testing requirements, the ViPrimePLUS Series II is available in two kit configurations:

Features	VEC Kits, Endogenous Control (EC) Kits	VIC Kits, Internal Extraction Control (IEC) Kits
Internal Extraction Control Template (IEC)		●
IEC Primers & Probe Mix (HEX probe)		●
Endogenous Control Primers & Probe Mix (HEX probe)	●	
2X PCR Master Mix	●	●
ROX Reference Dye	●	●
Nuclease-free Water	●	●
Template Preparation Buffer	●	●
Master Mix Preparation Buffer	●	●
Positive Control Template	●	●
Gene Primers & Probe Mix (FAM probe)	●	●

Next-Generation PCR Detection.

Ambient Shipping with Lyophilized Technology

ViPrimePLUS Series II continues to utilize a **lyophilized formulation**, enabling **economical room-temperature shipping** while **maintaining outstanding assay stability and performance**. This eliminates the need for cold-chain transportation, reducing shipping costs and ensuring greater convenience for global distribution and field applications.

Complete One-Kit Solution

Each Series II kit now includes all essential master mixes required for the assay, providing a true **ready-to-use solution** that minimizes preparation time and reduces pipetting errors. The **included ROX reference dye** ensures **compatibility with virtually all major real-time PCR instruments,** simplifying workflow across different laboratory platforms.

Enhanced Genetic Variant Coverage

Leveraging the latest advances in bioinformatics and sequence analysis, Series II features **newly optimized primer and probe sets** targeting the most **up-to-date genetic variants**. Carefully designed against the latest NCBI reference sequences, these assays deliver enhanced specificity, broader target coverage, and reliable detection across diverse strains and variants.

Expanded Multiplex Detection

Beyond traditional single-target assays, ViPrimePLUS Series II now offers multiplex formats capable of detecting up to **two to four targets in a single reaction**. This significantly improves laboratory efficiency by reducing reagent consumption, shortening turnaround time, lowering cost per test, and increasing sample throughput.

Custom Assay Development Services

Vivantis offers custom assay development services to meet your specific testing needs. Whether you require the detection of diseases not currently available in our product range or wish to combine multiple disease targets into a single multiplex Real-Time PCR kit, our experienced R&D team can develop a solution tailored to your application. **Contact Vivantis today to develop a solution tailored to your requirement.**

Key Features

Advanced *Taq*Man® Technology

Powered by trusted *Taq*Man® chemistry for robust, accurate, and reproducible Real-Time PCR performance.

Ambient Shipping & Broad Coverage

Lyophilized format enables room-temperature shipping with detection of over **500 pathogen subtypes**

Complete One-Kit Solution

Includes master mixes and ROX dye for convenient, ready-to-use assays on major qPCR platforms.

High Sensitivity

Detects as few as **<100 target genome copies** for confident low-level pathogen detection.

Exceptional Specificity

Highly specific primer and probe design minimizes cross-reactivity and ensures accurate target detection.

Comprehensive Quality Controls

Endogenous or Internal Extraction Controls verify sample quality, extraction efficiency, and amplification performance.

Up-to-Date Primer & Probe Design

Optimized against the latest genetic variants using current NCBI reference sequence databases.

Multiplex & Customizable Testing

Detect up to four targets simultaneously or develop customized panels for specific testing requirements.

A Comprehensive Portfolio for Every Testing Need

With **over 600 validated Real-Time PCR assays,** the ViPrimePLUS Series II portfolio offers one of the most comprehensive selections for molecular detection. The extensive range covers **human pathogen detection, veterinary diagnostics, food safety, and plant pathogen detection,** targeting a broad spectrum of **bacteria, viruses, fungi, and parasites.**

Finding the right assay is simple—each kit is named according to its target pathogen, allowing users to quickly search by **pathogen name** or **kit name**.

Endogenous Control (EC) Gene Detection Kits

ViPrimePLUS VEC Kits Series II integrate the detection of an Endogenous Control (EC) within the same PCR reaction, enabling simultaneous verification of sample quality and assay performance for greater confidence in every result. By targeting a naturally occurring housekeeping/reference gene, these kits provide reliable internal quality control for human specimens where endogenous nucleic acids are consistently present. Available in both singleplex and multiplex formats, ViPrimePLUS VEC Kits Series II offer a robust and convenient solution for accurate molecular diagnostics.

Internal Extraction Control (IEC) Gene Detection Kits

ViPrimePLUS VIC Kits Series II are supplied with a synthetic Internal Extraction Control (IEC) that is added during nucleic acid extraction to simultaneously monitor extraction efficiency and PCR amplification, ensuring reliable quality assurance throughout the testing workflow. This built-in control simplifies troubleshooting, enhances confidence in true negative results, and is particularly well suited for non-human or variable sample matrices, including veterinary, food, environmental, and other research applications. Available in both singleplex and multiplex formats, ViPrimePLUS VIC Kits Series II deliver reliable performance across a wide range of sample types.

Why Upgrade to ViPrimePLUS Series II?

Experience the next generation of Real-Time PCR gene detection with enhanced convenience, broader flexibility, and an optimized workflow—designed to simplify laboratory operations while delivering the trusted performance of ViPrimePLUS.

Series II at a Glance

Original ViPrimePLUS	NEW ViPrimePLUS Series II
Liquid assay components	Advanced Lyophilized Format for superior stability and room-temperature shipping
Additional master mix required	Ready-to-Use Complete Kit with master mixes and universal ROX included
Cold-chain logistics	Cost-Saving Ambient Shipping with uncompromised assay performance
Standard 150-reaction pack	Convenient 100-reaction pack to better suit routine laboratory workflows
Standard assay panels	Flexible Custom Panel Design tailored to your specific pathogen targets

Advance Your Molecular Testing with Confidence

Elevate your molecular testing capabilities with ViPrimePLUS Series II.

Experience the next generation of PCR detection with Vivantis.

For product inquiries, custom panel development, or technical support, contact Vivantis today and speak with our team to find the right solution for your laboratory needs.
